

# pXPS™ Portal

## Packing and Shipping

Delivering SAP shipping functionality to your desktop

pXPS is a cloud based solution built on SAP's Business Technology Platform (BTP). This solution extends SAP shipping functionality to non-SAP users, including mail rooms and third party inbound and outbound.

### Ease of Use

pXPS enables users to create shipping requests for any carrier through one user-friendly portal, no longer having to navigate multiple carrier websites. The configurable user interface streamlines the shipping process while adhering to business rules.

pXPS users can manage packing, rating, label printing and shipment tracking all from a single interface.

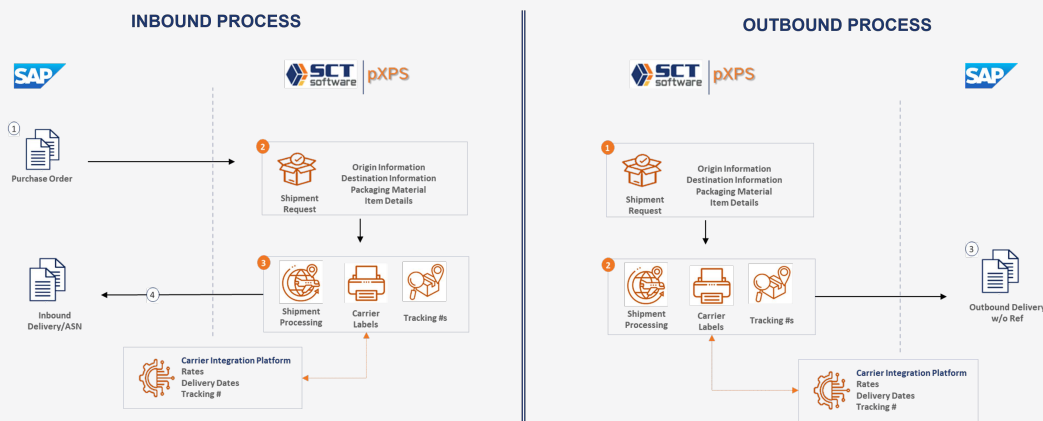

Personal user profiles aid in minimizing data entry and improving data accuracy while simplifying the shipping process and reducing human error.

### Key Benefits

- Extend SAP shipping functionality to non SAP users and vendors
- SAP integration delivers visibility across shipping processes
- Support 175+ carriers globally
- Tailor processes and UI to your business rules
- Leverage strong partnerships with SAP

### Core Functionality

- Intuitive and flexible UI
- Separate creation and processing of shipping requests
- Inbound and Outbound shipping
- Carrier compliance documents including shipping labels and manifests
- Fully aligned with your SAP® environment and processes
- Integrated shipping data within SAP for Parcel and LTL shipments
- Supports both inventoried and non-inventoried items
- Built on the SAP® Business Technology Platform (BTP)

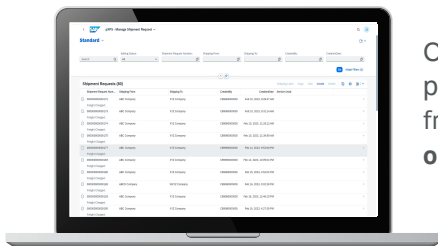

## Flexibility

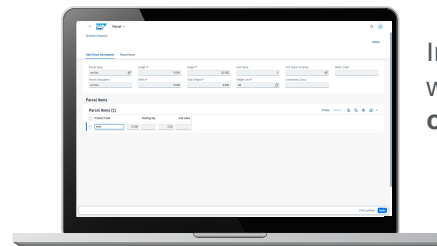

pXPS can be easily tailored to a company's unique requirements, adhering to business rules and aligning with required shipping procedures. This extends to both internal users and external partners.

One off shipping activities can be standardized through process alignment and seamless SAP integration. This enables complete shipping visibility, standard reporting and greater control of inbound and outbound shipping.

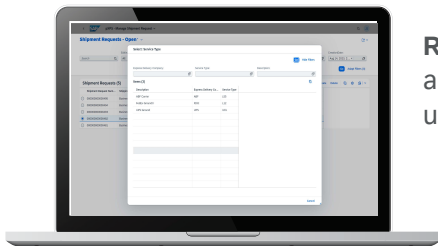

## pXPS delivers the rich functionality you need with the simplicity you desire.

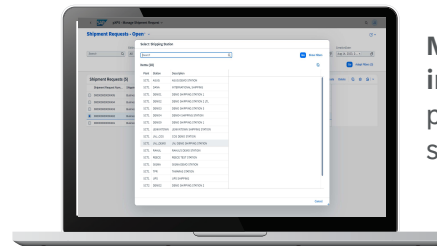

Create and process shipments from any browser outside of SAP.

Inbound shipping with purchase order integration.

Rate shopping and tracking data updates

Master data integration for packing materials and shipping stations

## About SCT Software

SCT Software is a leading provider of innovative logistics execution software servicing the SAP® user community. SCT software solutions are used globally by manufacturers and distributors to streamline the logistics process. The company's products give customers increased visibility ensuring supply chain efficiency. Using SCT solutions, customers gain a competitive edge by reducing overall operational cost, improving customer service levels and increasing profitability. Focused exclusively on complementing SAP® logistics capabilities, SCT solutions enable customers to leverage the investment in their SAP® landscape while providing best-of-breed functionality.
